

Marquis Buckley

Secret Clearance | 832-820-3667 | marquisebuckley@gmail.com | Houston, TX

EDUCATION

Texas Southern University

B.S. in Computer Science GPA 3.8/4.0

Houston, TX

May 2026

TECHNICAL SKILLS

Programming Languages: C++, JavaScript, TypeScript, SQL, HTML, CSS

Libraries and Tools: Bootstrap, Django, Git, GitHub, Docker, VS Code, Netlify, Jira, Miro

Databases: MySQL, Supabase (PostgreSQL)

WORK EXPERIENCE

Insurance Adjuster

Sedgwick, U.S. Virgin Islands

December 2022 - May 2023

- Managed **20–30 active claims weekly** across auto, workers' comp, commercial property, and liability while maintaining audit-ready documentation and timely stakeholder updates.
- **Reduced claim cycle time by 15%** by improving “data layer” quality (cleaner intake data, tighter documentation standards), and automating follow-ups to prevent bottlenecks.
- Strengthened decision accuracy by validating evidence, reconciling discrepancies, and documenting rationale clearly supporting consistent outcomes and smoother handoffs across teams.

Aviation Fuels Quality Assurance

U.S. Navy, Global

February, 2015 – February, 2023

- **Led quality and safety compliance for a 50-member fuels operations unit** by enforcing standards, running inspections, and ensuring consistent execution during high tempo operations.
- **Maintained 100% accurate operational and safety logs** by auditing documentation daily and tightening verification steps to prevent errors and rework.
- **Detected and resolved fuel quality “performance issues” at the source** by performing aviation fuel quality checks, running specification-based tests, and taking corrective actions (e.g., filtration/purification) when results fell outside limits.

PROJECTS

Salon803 | Full-Stack Business Website | Salon803.com

- **Improved discoverability and shareability** by implementing structured data, Open Graph tags, and dynamic metadata; drove 106 pageviews, 57s average session duration, and 56% bounce rate in early analytics.
- **Optimized UX for real user behavior** by implementing responsive UI architecture and tap-to-call / tap-to-navigate deep links for a primarily mobile audience (74% of users).
- **Designed a reliable “transaction” workflow** using Google Apps Script to send automated confirmation emails to applicants and instant notifications to the business owner.

Machina | Enterprise Network Deployment

- **Designed a resilient multi-router OSPF architecture** with dual-path failover and optimized routing costs to maintain connectivity during link failures.
- **Built scalable network data paths** for six divisions by deploying structured LAN subnets, gateways, and switch uplinks to control broadcast domains and support future growth.
- **Engineered a secure network perimeter** by integrating internal core routing, WAN edge routing, and firewall segmentation to enforce traffic inspection and controlled access.

Customer Invoice Database | SQL Project

- **Designed and implemented a relational database schema** to manage customer records, invoices, and payment history using normalized SQL tables.
- **Wrote optimized SQL queries** to retrieve invoices, calculate balances, and generate customer-level summaries for reporting.
- **Improved data integrity and query reliability** by enforcing primary keys, foreign key constraints, and validation logic.
